Experience

GrammaTech   **Ithaca, NY**

Director of Automated Software Engineering   *2018 – present*

In this role I grow GrammaTech's research division building our staff, expertise, infrastructure, projects, and tooling. I research and develop tools and techniques advancing the boundaries of automated software development and reverse engineering.

- Lead government funded research and development projects totaling tens of millions of dollars.
- Lead technical staff including managers, scientists, software engineers, and test engineers.
- Lead GrammaTech's *Binary Rewriting* and *Machine Programming* research areas:

  Machine Programming: Programmatic analysis, transformation, and generation of source-code to automate common software engineering tasks including writing code, writing tests, refactoring, maintenance, optimization, bug repair

  Binary Rewriting: Programmatic analysis and transformation of software binaries to improve security and efficiency giving developers and users control over their software supply chains

- Lead in the adoption of emerging techniques and technologies to solve research problems.
  - Formal methods including Logic Programming for efficient program analysis and SMT for enumerative search and synthesis
  - Evolutionary Computation techniques for open-ended optimization
  - Machine Learning to optimize search problems and generate code including integrating with OpenAI's Codex model.

- Maintain and grow technical infrastructure, improve engineering efficiency
  - Helped spur and manage a company-wide transition from SVN to Git
  - Led company-wide adoption of continuous integration and deployment (CI/CD) practices and tooling. Including adoption of Docker for reproducible execution environments, Kubernetes for reliable deployment of internal services, packaging for reduced build times and convenient software distribution, and standardization of the Merge Review process to improve code quality and development efficiency.
  - Managed the refactoring of a 2-decade-old C/C++ code base built with custom in-house tools to modular, testable, modern C++, built with standard tools.
  - Led the adoption of an open-source development model increasing GrammaTech's impact in the research community and improving the technical underpinnings of our commercial tools.
    - *GrammaTech Intermediate Representation for Binaries:* `https://github.com/grammatech/gtirb`
    - *Datalog Disassembler:* `https://github.com/grammatech/ddisasm`
    - *Software Evolution Library:* `https://github.com/grammatech/sel`

- Lead the research and development of the following tools and technologies:

  GTIRB/DDisasm : IR supporting a binary analysis and rewriting ecosystem including unaffiliated researchers and developers

  Mnemosyne : Automated software development assistant integrating internal and third-party tools for program synthesis, automatic test generation, typing, invariant inference, and more into the developer's IDE.

  Binary Hardening Transformations : Rewriting dynamic executables to static and inserting control flow protections

  MergeResolver : Automated merge conflict resolution as a GitHub action `https://mergeresolver.github.io`

  Structured Search Replace (SSR) : AST-aware software search and replacement and automated software refactoring.

Senior Scientist   *2014 – 2018*

- Contributed to the following research and development efforts:

  CFAR: Helped lead an effort to use binary rewriting to generate N-variant systems from a single stripped COTS binary.

  BED: Led research into the use of evolutionary techniques to evolve *exact* C decompilation of stripped COTS binaries.

  GenPatcher: Implemented a tool for the automated repair of flaws in binary executables.

University of New Mexico   **Albuquerque, NM**
Research Assistant   *2009 – 2014*
- Research and development of evolutionary techniques for software maintenance and improvement.
  Developed novel techniques of software repair applicable to compiled assembler code and stripped binaries.

  Developed an evolutionary search-based optimization technique applicable to compiled assembly code. Reduced energy consumption of a range of benchmark programs by 20% beyond the best available compiler optimizations.
- Empirical and theoretical investigation of biological properties of software.
  Empirically explored the robustness of software to random perturbation. Demonstrated mutational robustness across; C/C++ source, compiled assembler, LLVM intermediate representation, and stripped executables.

  Identified empirical evidence that the modern software development ecosystem is the product of an evolutionary process in which software developers and users perform mutation, reproduction, and fitness evaluation.

Counsyl   **Palo Alto, CA**
Open Source Software Consultant   *2010 – 2011*
- Consultation and development in application of open-source software to automated technical document generation.

The MITRE Corporation   **McLean, VA**
Senior Artificial Intelligence Engineer   *2005 – 2009*
- Lead developer of the Rapid Argus Modeling for Biosurvalience Operations (RAMBO) system for disease modeling and surveillance. RAMBO ran Bayesian models over text media statistics collected from across the world to identify emerging epidemics. RAMBO was used daily by roughly 50 biosecurity analysis at Georgetown University.
- Prototype the STAT (Statistical Tracking and Analysis of Text) system for temporal analysis of multilingual text.
- Systems administration for production Unix/Linux systems.

International Technical Analyst   *2004 – 2005*
- Research assistant, composed documentation and user manuals.

Volunteer

Planned Parenthood   **Pittsburgh, PA**
Clinic Escort   *2019 – present*

National Poor People's Campaign
Web Design   *2020 – present*
- Build and maintain the *Nonviolent Medicaid Army* web site at `http://nonviolentmedicaidarmy.org`.
- Build and maintain the *National Union of the Homeless* web site at `https://nationalunionofthehomeless.org`.

GNU Emacs
Contributor   *2009 – 2014*
- Author and maintainer of Emacs Org-mode's facilities for embedding executable source code into documents.

Education

University of New Mexico   **Albuquerque, NM**
Ph.D., Computer Science   *2014*
Advisor Stephanie Forrest
Thesis Neutral Networks of Real-World Programs and their Application to Automated Software Evolution

Kenyon College   **Gambier, OH**
B.A., Mathematics, Minor Philosophy   *2004*

Skills

Programming languages: Common Lisp, Python, C/C++, JavaScript, OCaml, Clojure, Scheme, Prolog/Datalog

Technical Expertise: Emacs, Git, Docker, CI, K8, Linux, GDB, SMT/SAT Markdown, LaTeX, HTML/CSS

Domains: Programming Languages, Software Engineering, Binary Analysis, Formal Methods, Artificial Intelligence

Publications

Doctoral Thesis
